The City retains the authority to require appropriate information to be submitted in accordance with American Water Works Association (AWWA) standards to settle any dispute.

Water Protection Standard  
Oakland Park Fire Marshal's Office  
Adopted January 2, 1995.

This standard is applicable to both new and existing sites where the owner wishes to plat, replat, build, renovate, or remodel, or obtain any development order.

In areas where, in the opinion of the Fire Marshal or his representative, there are inadequate fire hydrants in number or quality, unlooped water lines, or inadequate pressure available to protect lives or property, the owner of the property must provide such improvements as are necessary to meet the following requirements:

- ♦ **Pipe Size.** The minimum size pipe to which hydrants are attached shall be 6" in single family residential areas and 8" in size in all other areas. All such lines and hydrants shall be in utility easements dedicated or deeded to the City or to the Utility transmitting water to said property if such deeds or easements are requested by the City or the Utility.
- ♦ **Hydrants.** Every street intersection shall have one fire hydrant on at least one corner of the intersection unless situated at four lane or greater trafficway where two hydrants will be required on opposite sides of the major artery. Additionally, and in any case, hydrants shall be provided to insure that the maximum distance between a hydrant and all portions of a structure is 500 feet in all single family residential areas and 300 feet in all other areas. Maximum distance between hydrants and vehicles with no structures involved shall not exceed 400 feet. Distance shall be measured only in directions and paths where a fire hose can be laid, and it shall be given that a hose cannot be laid across any street having a width greater than 24 feet of pavement. Alternatively, the required distances may be doubled for any building choosing to be fully sprinklered if not otherwise required to do so.
- ♦ **Hydrants-Technical-** All hydrants shall be Mueller Super Centurion or approved equal for maintenance standardization, with bottom opening of 5 1/4 " in diameter. They shall be erected and maintained so as to have the center of the steamer connection a minimum of 18" above the crown of the nearest roadway and a minimum of 18" above the surrounding ground with four foot clearance in any direction.
- ♦ **Looping-** It is the intent of this standard that the entire fire water supply system for this City be looped for both pressure and reliability. There shall be no fire service line constructed or replaced without looping to the system, unless waived by the Fire Marshal for cause.
- ♦ **Pressure and Flow Requirements-** All fire hydrants shall have a minimum of 20 PSI residual pressure while flowing the requirement in GPM. The minimum GPM flow shall be:

♦ R1.....	1,000GPM
♦ RM10.....	1,500 "
♦ RM16, CF, and B1, under 20,000 square feet and two stories or less.....	2,000 "
♦ RM 25, other B1 and CF, and all other, including B2,B3,I1,as well as any operation deemed hazardous by the Fire Marshal's Office.....	2,500 "

These figures shall apply to both area zoning and actual building use.

Alternatives for buildings installing non-required systems:

- 1- The installation of a fully automatic, monitored fire and smoke detection system throughout a structure shall reduce the minimum GPM flow requirement by twenty-five percent.
- 2- The installation of a monitored automatic fire suppression system throughout a structure shall reduce the minimum GPM flow requirement by twenty-five percent.  
(In no case should total reductions for alternatives be more than 50%)
